

Integer Multiplication

Set out. Multiply the absolute values, then decide the sign. Matching signs make a positive product; different signs make a negative product.

SEE ONE

$$(-4) \times (-11) = 44$$

Multiply the absolute values, then decide the sign. Matching signs make a positive product; different signs make a negative product.

$$(-4) \times (-11) = 44$$

TRY THE TRAIL

1

Compare the signs.

2

Choose the product sign.

3

Multiply the absolute values.

Notice this: The sign rule depends on whether the two signs match, not on which factor has the larger value.

CHECK YOUR TRAIL SENSE

Try this one without help.

$$(-4) \times (-2) = \underline{\hspace{2cm}}$$

One careful line at a time. Accuracy comes before speed.
